

## Frozen Tissue Section Slide Certificate of Analysis

**Product Name:** Frozen Tissue Section Slide

**Catalog No.:** T1XXXXXX

**Shipping Condition:** Dry ice

**Storage Condition:** -70°C

**Shelf Life:** Half a year from the date of receipt under proper storage condition

### Description

The tissue was frozen in liquid nitrogen immediately after excision. The tissue sections are 5-10 µm in thickness, mounted on positively charged glass slides, and fixed by cold acetone. The tissue section slides can be used for both immunohistochemistry and *in situ* hybridization. One of the tissue section slides from each lot was stained with H & E to ensure the quality. It is an ideal product for rapid cellular localization of RNA and protein expression.

**FOR RESEARCH USE ONLY**
